

# Amodel® HFFR-4133 polyphthalamide

Amodel® HFFR-4133 is a 33% glass-reinforced, halogen-free, flame retardant polyphthalamide (PPA) resin which offers enhanced processing capabilities for electrical and electronic applications. This resin is rated V-0 by Underwriters Laboratories using the UL94 test and is hot-water moldable. It has high flow and a wide processing window and offers good surface appearance, especially for larger electrical components.

This grade can withstand the demanding infrared reflow soldering process typically used in the electronics industry. It is well suited for connectors and other electrical devices requiring surface mount technology (SMT).

### Injection Notes

---

Injection Rate: 3 to 4 in/sec

Holding Pressure: 50% of injection pressure

#### Storage:

- Amodel® compounds are shipped in moisture-resistant packages at moisture levels according to specifications. Sealed, undamaged bags should be preferably stored in a dry room at a maximum temperature of 50°C (122°F) and should be protected from possible damage. If only a portion of a package is used, the remaining material should be transferred into a sealable container. It is recommended that Amodel® resins be dried prior to molding following the recommendations found in this datasheet and/or in the Amodel® processing guide.

### Notes

---

Typical properties: these are not to be construed as specifications.

<sup>1</sup> The automotive specification APTIV M8101001 is for Amodel® HFFR-4133 NT.

<sup>2</sup> The automotive specification APTIV M8101002 is for Amodel® HFFR-4133 BK 324.

<sup>3</sup> Higher values are for NT and BK324.

<sup>4</sup> Specimens conditioned for 96 hours at 95°F (35°C) and 90% RH

<sup>5</sup> This flammability rating is not intended to reflect hazards presented by this or any other material under actual fire conditions.

<sup>6</sup> Note that higher mold temperatures may be necessary for very thin-walled parts, or to achieve better quality surface finish.
